\$1,000,000 OVER THE LONG HAUL?

In 1988 Bob Christian, (573) 778-7210, Kneibert Clinic, Poplar Bluff, Missouri installed our SBD-2500 Computerized Temperature Control (CTC) system. Their employees were taught to maintain the CTC system, including repairs. During the over eighteen years Kneibert spent less than 1% per year on repairs. In the late 90's they converted the CTC system operating system from DOS to Windows. The balance of the CTC system remains as installed in 1988.

Last March Kneibert reached an energy saving milestone of over \$1,000,000 in energy cost.

EIGHTEENTH YEAR OPERATION OF CTC SYSTEM

KNEIBERT CLINIC

Total CTC System Savings Through March 2007 Year = \$1,008,109.49
Number Of Months From CTC System Installation Date For Payback:= 30

Kneibert's longevity is not unusual. We have CTC systems operating successfully since 1979. Many have been upgraded at nominal cost to Windows, but may are still DOS based with full support and service provided. We have never forced our customers to upgrade, nor abandoned one of our CTC systems.

We are the only control company with this record and at less than half the cost of others.
